CAC CA-15

The present model can be built in several levels of difficulty. The beginners should choose the easy level, without hidden constructions. For the more advanced modelers I have given the opportunity to build light interior and detailed gears and exhaust pipes. To model the interior, you need to build a hidden construction, which is easy to make. You can build the model with or without hidden tabs. This is absolutely free and I designed it to give you a sample of my new line models. I have left it in black and white variant. You can try and do artwork yourself. Also cockpit interior can be developed.

Plane details:

Wingspan	10.97 meters
Length	11.03 meters
Height	4.34 meters
Wing surface	23.50 sq m.
Empty weight	3 420 kg
Engine	1 PE Rolls-Royce Griffon
Power	1 Y 2305
Maximum speed	721 kph
Maximum range	1 850 km
Armament	6 12.7-mm machine-guns
