Biserujka - little cave on Krk island

Little cave is interesting tourist attraction. The cave's length is just about 110m, not very interesting compared to other caves. The cave temperature is between 10 and 13 °C which is refreshing on entry and frustrating on exit. Foot paths are maintained and safe, enabling anybody to visit the cave.

Cave visit will take less than 30 minutes including story about pirates.

Afterall, the cave is real Karst form with stalactites, stalagmites and even a column.

Most interesting part is refreshment.

Next stop after cave visit could be nearby bay Soline located between Klimno and Čižići.
